

CrewAnywhere2.0 Standardized Combined Lean FDR + Developer-Ready Technical FDR Standard

This document defines the official standardized formatting and architectural structure for all future CrewAnywhere2.0 Functional Design Requirements (FDRs / FRDs). All future CrewAnywhere2.0 documentation MUST follow this standardized Combined Lean FDR + Developer-Ready Technical FDR structure.

1. Standardized Document Header

- Module Name
 - Module ID
 - Product
 - Document Type
 - Primary Actor(s)
 - Related Modules
 - Status
-

2. Mandatory Standardized Section Ordering

- 1. Document Information
- 2. Overview
- 3. Objectives
- 4. Actors
- 5. Preconditions
- 6. Trigger
- 7. High-Level Architecture
- 8. Main Process Flow
- 9. Lifecycle / Status Logic
- 10. Database Tables & Schema
- 11. ENUM Definitions
- 12. API Specifications
- 13. Validation Rules
- 14. Security Requirements
- 15. Audit Logging & Error Handling
- 16. Business Rules
- 17. State Transition Logic

- 18. UI Components
 - 19. Postconditions
 - 20. Acceptance Criteria
 - 21. Next Connected Module
-

3. Architecture Standards

- All FDRs must maintain Event → Job → Proposal → Assignment → Shift → Payment hierarchy consistency.
 - Proposal-centric hiring architecture must remain canonical.
 - Assignment lifecycle and operational execution layers must remain separated.
 - Database schemas, ENUMs, APIs, validations, and business rules are mandatory.
 - All workflows must remain lean while still developer-ready.
 - Future architecture scalability and modularity must be preserved.
-

4. Formatting Standards

- Consistent enterprise-grade formatting across all modules.
 - Consistent section numbering.
 - Consistent technical formatting for APIs and ENUMs.
 - Consistent naming conventions.
 - Developer-readable flow architecture.
 - Backend-ready lifecycle logic.
 - Structured validation and security sections.
-

5. Naming Convention Standards

- Use standardized naming conventions consistently.
 - Prefer standardized module naming such as:
 - Registration Process
 - Company Profile Creation Process
 - Job Application Process
 - Talent Selection Process
 - Event-Day Operational Execution Process
-

6. Canonical CrewAnywhere2.0 Positioning

- Marketplace + Workforce Operations Platform
 - Event Workforce Operating Infrastructure
 - Operational lifecycle architecture must remain consistent across all future FDRs.
-

7. Enforcement Rule

- All future CrewAnywhere2.0 FDR/FRD documents MUST follow this standardized format baseline.
 - New modules, operational layers, financial systems, and future expansion modules must align with this standard.
-

Approved as the official CrewAnywhere2.0 documentation standardization baseline.
